WORK EXPERIENCE

Manager – Product Owner | [Xanadu Realty \(PropTech | Real Estate Tech\)](#)

June 2024 – Present

Techno-functional owner for XOS, a proprietary enterprise CRM built ground-up on Dynamics 365. Operated as functional and technical lead simultaneously across all CRM modules, migrations, and integrations.

- Owned full requirements lifecycle — ASIS/TOBE gap analysis, stakeholder workshops, BRD documentation, functional specifications, and Visio process maps — across 12+ modules spanning B2B (developer onboarding) and B2C (revenue collection) workflows.
- Architected and delivered the complete D365 solution: entity modelling, BPFs, business rules, security roles, field-level security, and solution packaging across Dev, UAT, and Production environments for 750+ users.
- Led multiple end-to-end CRM data migrations using Python, SSIS, and KingswaySoft - including a full legacy-to-D365 migration completed in 2 months vs. a conventional 6-month timeline (67% faster) and several subsequent module-level migrations delivered in days, all with zero business downtime and full data integrity validation.
- Delivered external platform integrations connecting Dynamics 365 with LeadSquared, Salesforce (SFDC), omnichannel customer engagement platforms, and contact centre dialler systems using REST APIs, Azure Functions, and Power Automate HTTP connectors.
- Built and shipped 'Chanakya' end-to-end, a Canvas App + Power Automate multi-stage approval system on Dataverse for enterprise vendor governance, reducing approval-cycle overspending by 70%.
- Developed 30+ Power Automate Cloud Flows for business-critical automation: payment triggers, collection reminders, lead routing, LeadSquared-to-D365 sync, and SharePoint-integrated document management.
- Extended D365 with C#.NET custom plugins, custom workflow activities, and JavaScript web resources for complex business logic beyond out-of-the-box configuration.
- Led UAT design and execution across all modules: authored test scenarios, managed defect triage in Azure DevOps, and coordinated phased release sign-off with cross-functional stakeholders.
- Delivered change management and training certification programmes for 650+ users across all geographies; achieved high adoption with minimal post-go-live regression.
- Leveraged agentic AI tooling (Claude Code, GitHub Copilot) to accelerate plugin authoring, flow logic, and integration scripting — maintaining full architectural ownership and code review rigour, enabling a lean team to deliver at enterprise pace.
- Promoted Trainee → Assistant Manager (6 months) → Deputy Manager (4 months) → Manager — four promotions within two years in recognition of exceptional delivery and leadership; awarded Technology and Data Impact award by Group CEO.
